Rank:	0 hzzzzz:
Learning Objective:	Understand what testing is

Description

- 1. Typical test objectives, which can vary depending on context
- 2. Difference between testing and debugging

Comments

Comment by Ciocan Pál András [03/Feb/26]
Software artifacts are called Test Objects
Testing can be dynamic or static
Dynamic testing triggers a failure, Static testing identifies a defect and creates a review
Testing objective:
<ul style="list-style-type: none"> 1. Review requirements for the work product 2. Make sure to communicate with stakeholders about failures and defects 3. Make sure test object complies with requirements 4. Reduce the risk level of inadequate software quality 5. Validate test object is complete and works as expected
