Description

Traceability between Test Basis and Testware

Comments

Comment by [Ciocan Pál András](#) [09/Jun/26]

Test monitoring and test control => effective implementation => establish and maintain **traceability** throughout test process => between => test basis elements, testware(e.g. test conditions, risks, test cases) => test results => defects

traceability supports coverage evaluation => coverage criteria can be used as **KPI**, to show to what extent test objectives have been achieved

evaluating coverage + **traceability** => determine the impact of changes, facilitates audits and helps meet IT governance criteria

traceability => test progress reports and test completion reports easy to understand => including status of test basis elements

traceability assists in communicating technical aspects to stakeholders in understandable manner

traceability provides information to assess product quality, process capability and project progress against business goals
