Description

While generic, there are skills particularly relevant for testers to have.

Comments

Comment by Ciocan Pál András [12/Jun/26]

There are skills particularly relevant to testers:

1. Testing knowledge (using test techniques)

2. Thoroughness, carefulness, curiosity, attention to details, being methodical (identifying defects, especially the ones that are difficult to find)

3. Good communication skills, active listening, being a team player (effective interaction with stakeholders, convey information to others, understandable, report and discuss defects)

4. Analytical thinking, critical thinking, creativity (increasing effectiveness of testing)

5. Technical knowledge (increasing testing efficiency by using appropriate test tools)

6. Domain knowledge (able to understand and to communicate with end-users/business representatives)

Information about defects and failures should and must be communicated in a constructive way.
